

Hands on practical workshops

for some of the most commonly seen orthopaedic issues

A series of orthopaedic workshops are being held across Australia throughout August and are pitched to surgeons at a variety of levels.

From those that are just starting their journey into the world of veterinary orthopaedics through to those who are already established surgeons or specialists looking to further develop their skills.

The main topics being covered are

MMP

for Canine Cruciate Disease

RidgeStop™

for Patella Luxation

SOP™

for Fracture Repair

What I can expect to learn from these workshops:

Cruciata Disease

- Canine cruciate ligament and its treatment
- Cruciate controversies
- Cruciate surgical outcomes
- An introduction to MMP and Orthofoam
- How to perform the MMP procedure
- Clinical experience and publications

Patella Luxation

- Overview of patella luxation pathophysiology
- Diagnosis and current surgical treatments for patella luxation
- Classifying the degree of luxation and associated deformities
- The developments and rationale of RidgeStop™
- How perform the RidgeStop procedure

Fracture Repair

- Fracture repair systems – the flaws and failings
- Locking plate technology
- Features & biomechanics of the SOP™ system
- Where and how to use it
- Case reviews
- Publication overview
- Half a day practical session using a variety of anatomical sawbones
