Products & support for the veterinary neuro industry

The evolution of Neuromed

Part of the Orthomed and Infiniti Medical family, Neuromed is a new range of the highest quality products, education and technical advice developed to support surgeons who currently do or wish to offer neurosurgical procedures to their patients.

Orthomed has provided a multi-faceted service to the orthopaedic industry for many years, not just for their innovative, high quality implants, but also offering some of the highest regarded education within the industry, backed up by unrivalled support; be that either technical support or unmatched customer service.

Over the years, Orthomed has pioneered the combination of innovation, education and support within the orthopaedic sector and as they looked for new opportunities, it became clear that no one company was doing the same thing within the neuro industry. As a company that puts patient care, veterinary support and unequalled service as core values, the team felt that there was an opportunity to expand into the veterinary neurosurgery industry and offer the same level of product quality, innovation, technical support and customer service to this sector.

As a result, Neuromed was born.

Unrivalled support

Just offering products isn't what Neuromed is about. There are many companies that sell instruments and implants into the veterinary market, some better quality than others', but none rival the service offering from Neuromed, the quality of products, or the exceptional training, product knowledge and support that comes as part of the package.

The support you receive doesn't just come from the customer service department or the sales team (although they are the best in the business).

The team of orthopaedic and neurology specialists that we surround ourselves with have helped develop these instruments, implants and education and are always on hand to help you make the best instrument choices and where and when to use them.

It's not just the product range that makes us so special; it's the education that comes as part of the package.

We can't stress enough that there is a family of support behind you. Working with Neuromed gives surgeons the reassurance of knowing they have the full backing of a team of surgeons, advisors and product specialists supporting them all the way.

The Team

A powerful, flexible and highly adaptable clinical team

We talk a lot about the support we promise you but it's essential to us that you know who this team is. The Neuromed team are not just highly skilled neurosurgeons. We wanted to go one better and work with people who also share our passion for education.

Their ability to share their experience and explain how they deal with certain cases is invaluable, but we also know that neurosurgery is not always a "one approach fixes all" science, so having multiple people involved, all with different experiences, technique and processes makes our team even more powerful, flexible and adaptable.

We all learn from each other, trust each other and work with our products on a daily basis.

Sarit Dhupa

BVSc, DACVS

Dr. Dhupa has more than 20 years' experience in specialty veterinary medicine spanning three continents. After graduating from the University of Liverpool Veterinary Medical School, he went on to pursue advanced training in Anesthesia and Critical Care at the Royal Liverpool University Medical Hospital as well as advanced training in Surgery at Purdue University Veterinary Teaching Hospital. He subsequently held a faculty position at the University of Georgia's Veterinary Teaching School. His clinical skills are now focused on minimally invasive surgery including both natural orifice and vascular procedures. Dr. Dhupa has published a landmark series on spinal cord injuries and diseases and is a national and international speaker on topics of neurology, anesthesia, pain management and minimally invasive surgery.

Robert L. Bergman

DVM, MS Diplomate, ACVIM

Dr. Bergman received his DVM from the University of Georgia. He then completed a small animal rotating internship at the University of Georgia. Following internship, he pursued a residency in neurology and neurosurgery at the Virginia-Maryland College of Veterinary Medicine. Concurrently he completed a Master's Degree at Virginia Tech with a focus on neuroscience and cerebrospinal fluid analysis. He became a diplomate of ACVIM specialty of neurology in 2001. Dr. Bergman recently served 5 years and was chair of the ACVIM Neurology Certification Exam Committee.

Karl H. Kraus

DVM, MS (surg), DACVS

Dr. Kraus is Chief of Small Animal Surgery at Lloyd Veterinary Medical Centre at Iowa State University and diplomat of the American College of Veterinary Surgeons. He graduated from Kansas State University in 1985, completed residency training at University of Missouri-Columbia in 1989 and was professor of surgery at Tufts University from 1989 to 2007. He also held a joint appointment at Harvard University where he helped develop neurosurgical procedures on humans at Brigham and Women's Hospital from 1989 to 1998. His major areas of interest include fracture repair, external fixation, ACL repair, spinal stabilization and neurosurgery.

Scott Rutherford

BVMS, CertSAS, DipECVS, MRCVS

RCVS Recognised and European Specialist in Small Animal Surgery After graduating from Glasgow University in 2001, Scott spent six years in general practice before moving to Croft Veterinary Hospital in Northumberland in 2007 where he completed an ECVS residency in Small Animal Surgery in 2012. Scott became a European Veterinary Specialist in Small Animal Surgery in 2013 and an RCVS Recognised Specialist in 2014. He spent two years at both North Downs Specialist Referrals and then Willows Referral Services. He is a co-founder and director of Frank, Pet Surgeons. Scott is actively involved in clinical research, teaching and recently became an Associate Tutor at Chester.

Peter Early

DVM, DACVIM

Dr. Early is a graduate of the University of Florida, College of Veterinary Medicine. He spent two years at Cornell University, where he first completed a small animal rotating internship, followed by a second year as a staff veterinarian. He completed a Neurology/Neurosurgery residency at North Carolina State University and is a Diplomate of the American College of Veterinary Internal Medicine. He presently serves as a Clinical Associate Professor in Neurology and Neurosurgery at NCSU and provides regular locum work at multiple university and specialty hospitals throughout the country.

Code	Price
OMESSKITN	\$8008.00

Kit includes:

- 1x Rotating Kerrison Modular Handle
- 1x Rotating Kerrison Shaft - 1mm / 180mm 40° up-bite - Requires OM702390N
- 1x Rotating Kerrison Shaft - 2mm /180mm 40° up-bite - Requires OM702390N
- 1x Root Extractor - Dandy Nerve 230mm
- 1x Hooked Loop - Kirby Double-Ended
- 1x Hook - Gross Hook and Spoon
- 1x Rongeur - Ruskin Compound Action, Straight 5mm / 180mm
- 2x Elevator - Freer 4.5mm / 190mm Double Ended Sharp / Blunt
- 1x Retractor - Army Navy, Pair 210mm
- 1x Senn Retractor - Double Ended Sharp
- 1x Lempert Rongeur
- 1x Curette - Buck ear size 1mm / 2mm Straight Sharp
- 1x Curette - Buck ear size 3mm / 3mm Straight Sharp
- 1x Curette - Williger 3+4mm / 140mm
- 1x Drop Gelpi - Drop angle - Drop Handle - Small 115mm
- 2x Drop Gelpi - Drop angle - Drop Handle - Large 165mm
- 1x Suture Forceps - Fine Touch Tissue Forceps 180mm with Platform

BOSS Lights

Illuminate your procedures with shadowless, cool, bright light

Neuromed is delighted to introduce two new disposable lighting systems into the veterinary market

LightMat®

LightMat™ The patented fiber-optic technology provides white, shadow less light throughout the procedure, allowing the surgeon to illuminate the surgical cavity with cool, bright light.

The Lightmat range incorporates different sizes and models, and allows each device to be used as a retractor, or to be attached to an existing retractor or flat surfaced device.

VersaLight™

VersaLight™ This four-in-one hand tool increases clinical efficiency, providing not just cool white light directly where you need it, but also suction and irrigation, regulated with controls on the handle, and moderate retraction with two available handle angles.

Loupes & Headlights

Enhance visibility
and accuracy during
neurosurgery

Magnification and illumination are some of the most important tools required during neurosurgery.

Apart from providing better vision and light of the work area, there are many other benefits to wearing loupes for surgery, such as proper magnification, better ergonomics, reduced eyestrain and improved vision.

Loupes

Custom made Through-The-Lens

Size	Code	Price
2.7x	OMCUS270ADI	1678.00
3.1x	OMCUS310ADI	1822.00

A lightweight, premium, through-the-lens loupes, custom made for each individual user. They provide extremely precise optical quality and a large field of view and are lighter/sleeker than flip-ups, making them comfortable and easy to use. Available in two different magnifications; 2.7x and 3.1x.

 PeriOptix®

Legacy Flip Ups

Size	Code	Price
2.5x	OMPAN250ADI	\$1294.00
3.0x	OMPAN300ADI	\$1390.00
3.5x	OMPAN350ADI	\$1630.00

An inexpensive, reliable and robust set of adjustable loupes. Available in three different magnifications; 2.5x, 3.0x and 3.5x

 PeriOptix®

Headlight System

Microline Mini Headlight System

Code	Price
OMALED42INT	\$1178.00

The Microline Mini LED is significantly smaller and lighter than most other LED headlights.

With light intensity up to 40,000 lux and a battery life of eight hours, this lightweight headset is a perfect addition to both the flip-up and custom made loupes.

Firefly Cordless Headlight System

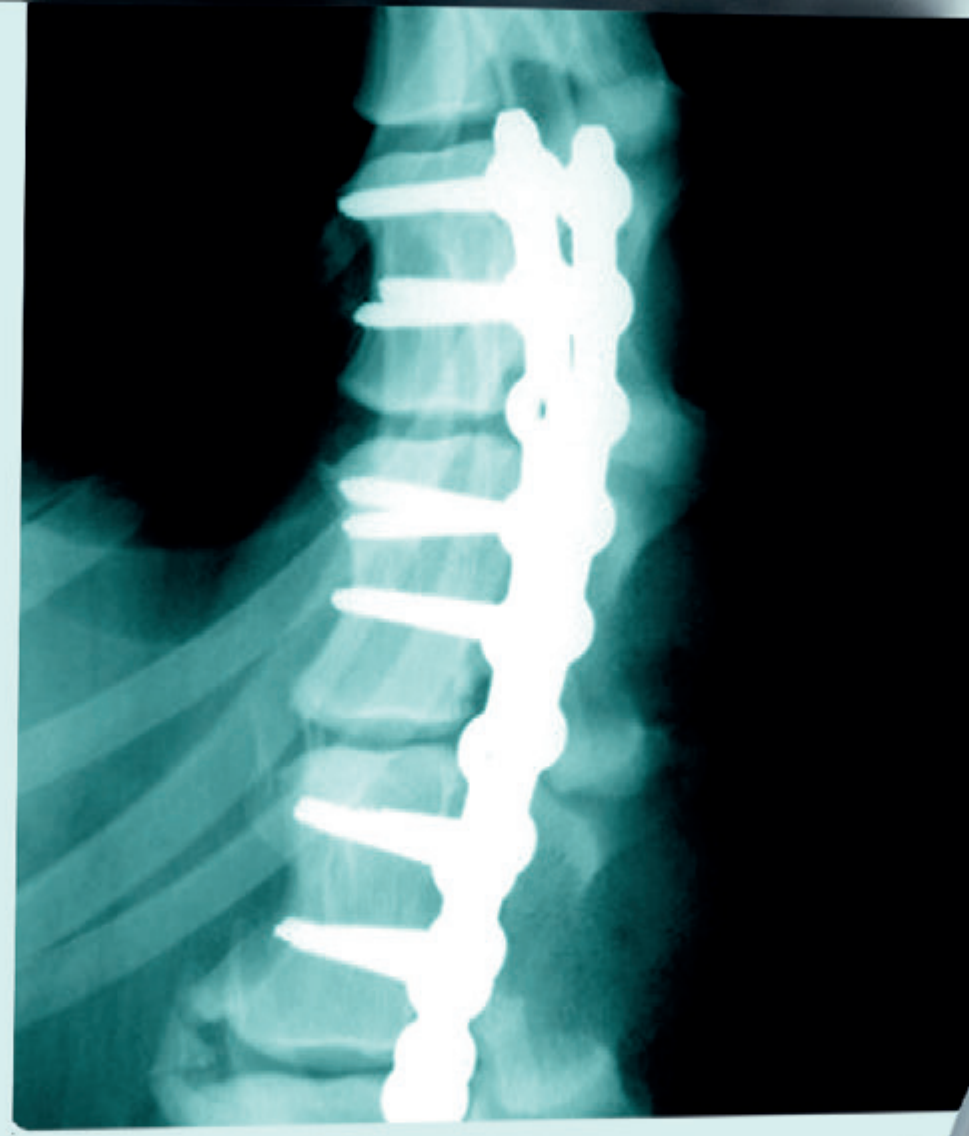

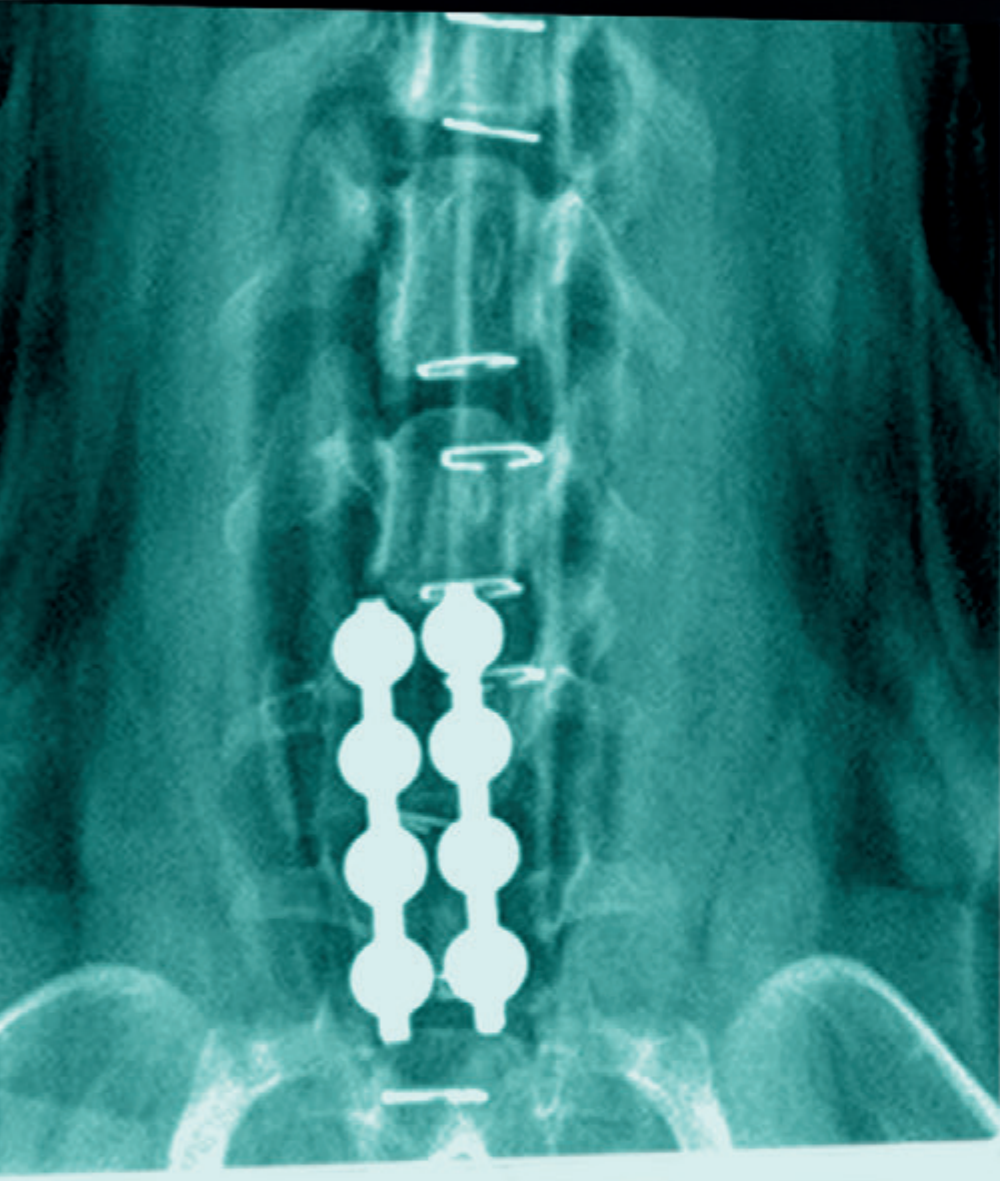

Code	Price
OMALED599	\$1980.00

A powerful headlight that removes the need for power packs and cables.

With light intensity reaching up to 32,000 lux, the Firefly is a cordless, powerful and elegant headlamp.

neuromed

SOP™

A world leading locking plate spinal fixation system

INFINITI MEDICAL

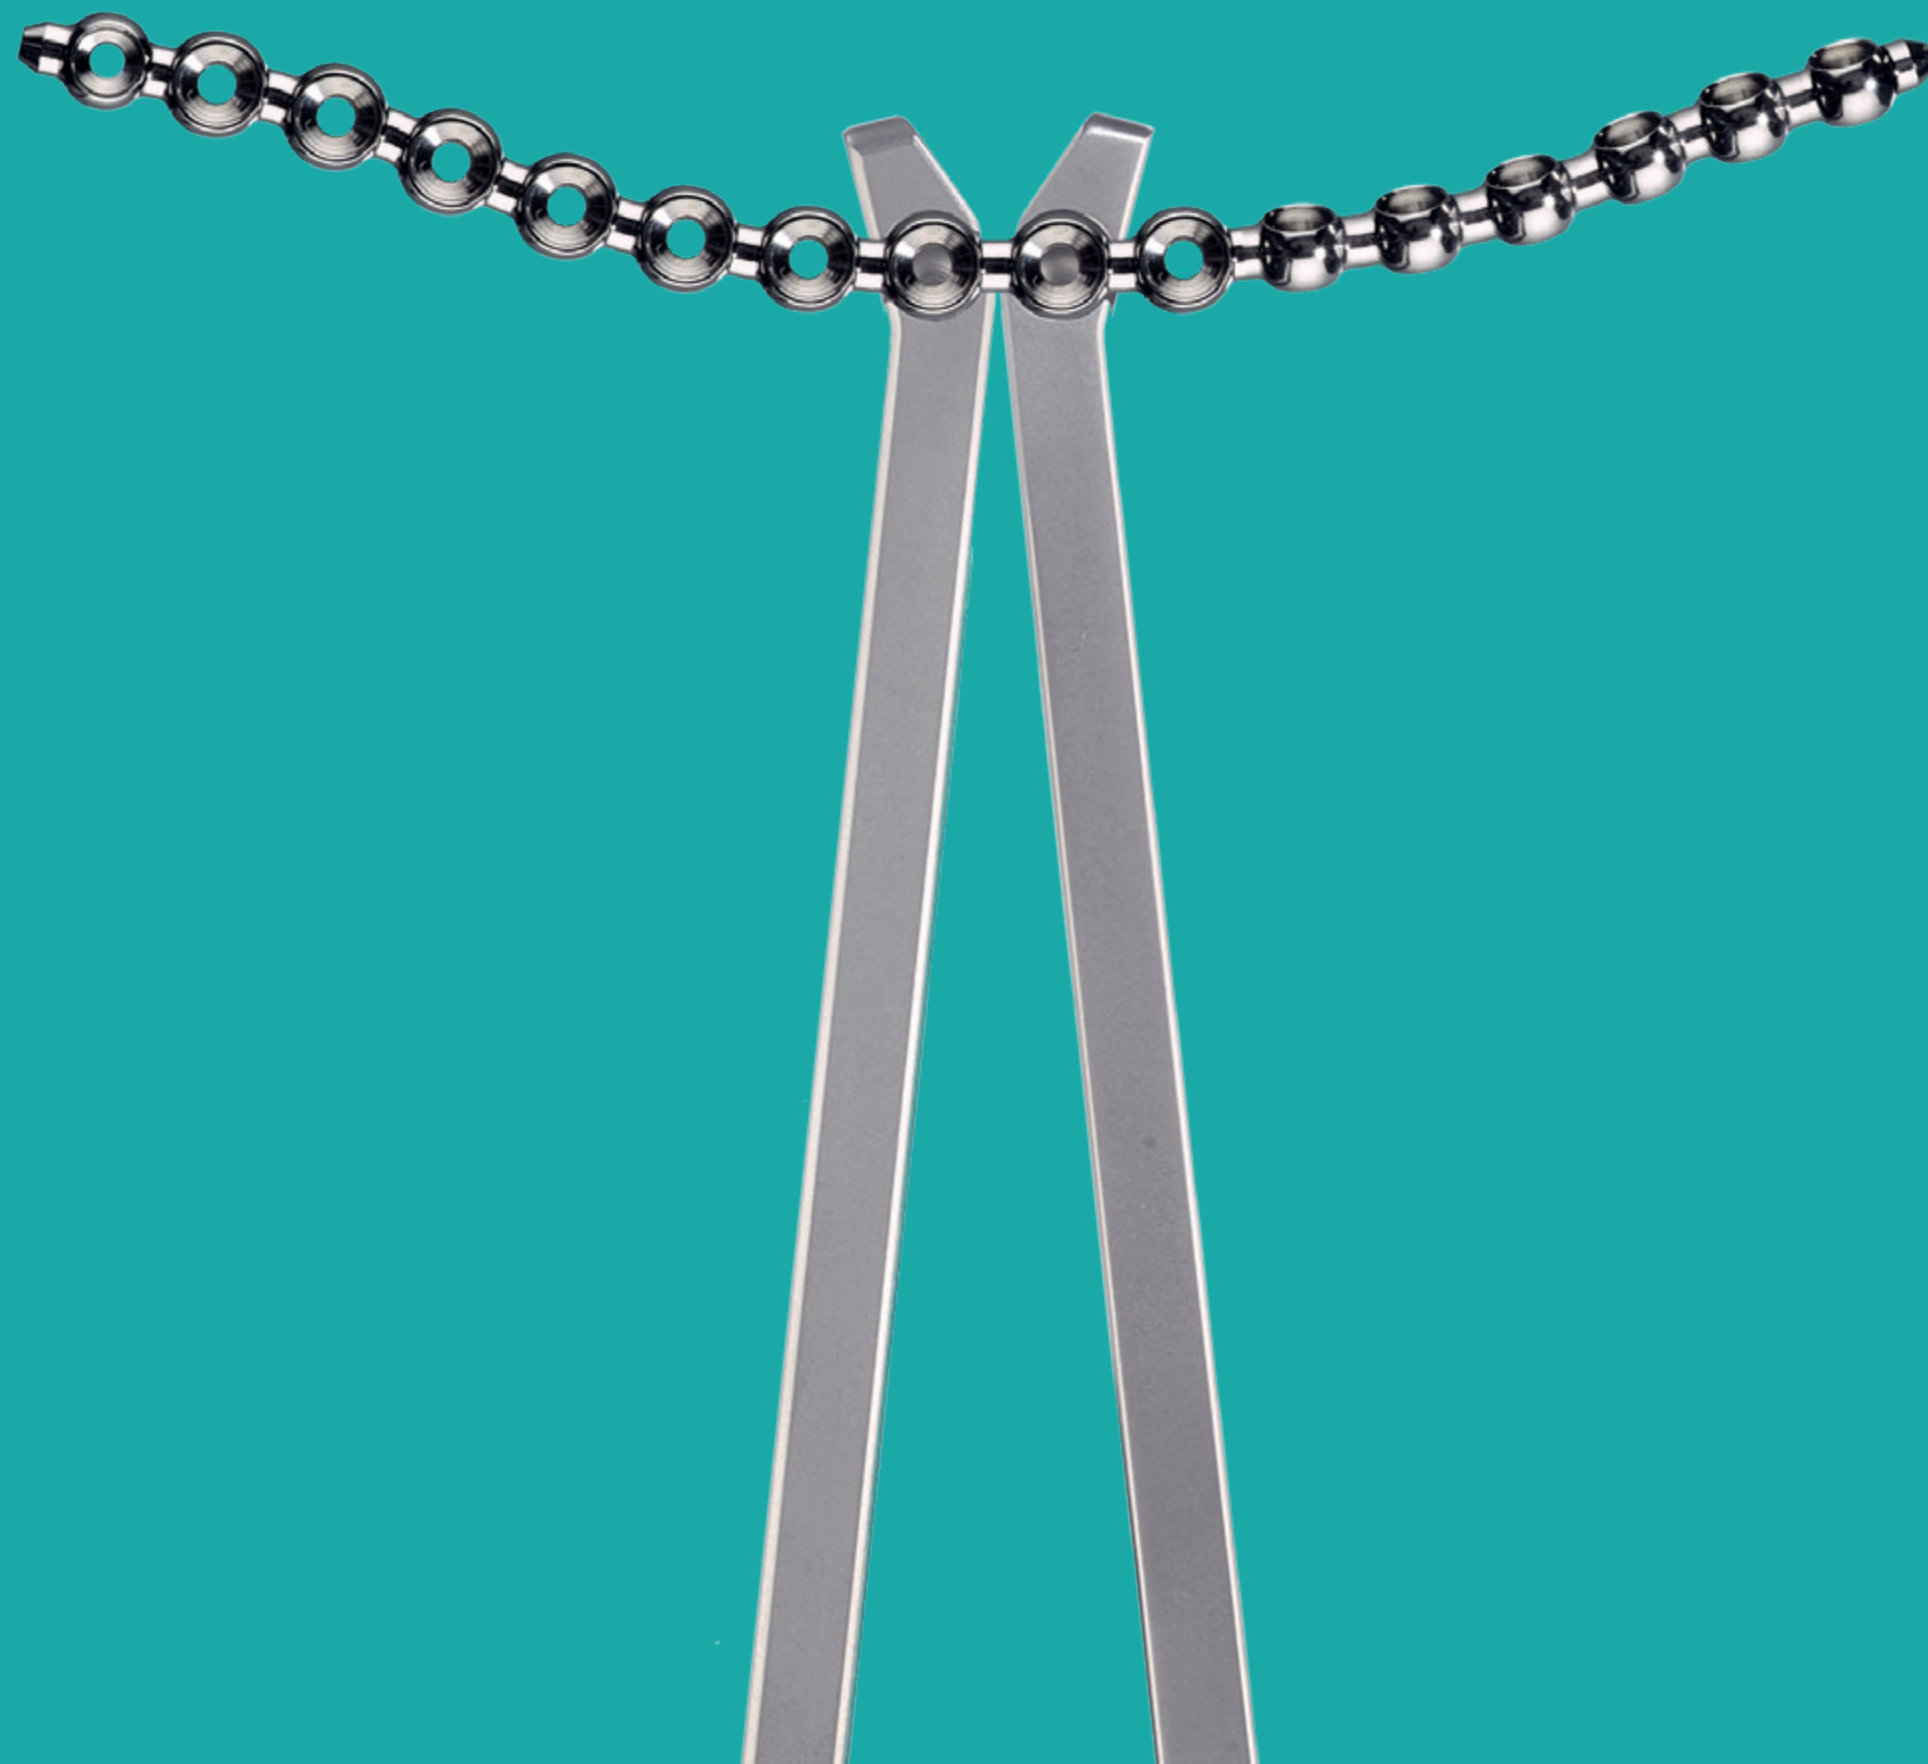

orthomed

neuromed

A family you can trust in the veterinary world

SOP™

A world leading locking plate spinal fixation system

The SOP™ (String of Pearls) system was designed to serve as a locking plate system for the veterinary and human orthopaedic community.

The SOP™ can be thought of as internal – external fixator and is applicable in a huge array of fracture repairs. SOP™ also serves as a locking spinal fixation system, much like a pedicle screw system or locking cervical fusion device. It does not lag onto bone which accommodates irregularities of the vertebral column.

The SOP™ can be used for cervical fracture repair or cervical fusion in case of instability. Available in three sizes of system (2.0mm, 2.7mm and 3.5mm) the SOP™ plates and instruments are a cost effective and extremely versatile addition to any surgeons toolbox.

Further information and user guides about SOP™ can be found on our website.

Education

Working better together

Just selling products on our website or through a catalogue is not what we're about. Education and training are the beating heart of what we do and we believe that it is the key to improving the industry in terms of not only product, but also education and skill level.

We want to empower surgeons, not just providing them with the best products, but educating them in how best to use the tools that we have placed at their disposal. Our comprehensive training enables the surgeon to carry out innovative surgery with complete confidence, facilitating the best possible outcomes for surgeons, patients and pet owners

Our incredible clinical team offers spine and neurology training across the globe. Our range of courses are suitable for surgeons at any level starting with spine courses designed for skilled general surgeons, who wish to expand their surgical repertoire to spinal surgery, incorporating topics such as neurological examination, fenestration and

laminectomy, right through to advanced neuro courses covering topics such as craniotomies, cervical stabilisation and foraminotomies.

All courses take place in some of the most highly respected training centres in the world, with facilities that are second-to-none.

Most importantly, every attendee is treated as an individual. The speakers place great importance on spending one-on-one time with delegates, listening, answering questions and offering practical and impartial advice. This is how we like to do things - get in touch to find out more and to join the Neuromed family.

We want to empower surgeons, not just by providing them with the best products, but by educating them how to use them as well.

Our Family

A global partnership to support vets and ensure healthy pets

A family you can trust in the veterinary world

It's not what we say that counts, it's how we fulfil our promises. Our values and our ethics are much more than just words written in a brochure – they are demonstrated by the actions and the commitments which we dedicate to the veterinary industry.

The Neuromed Family is an ever-expanding team of unrivalled customer service and sales support individuals, backed up by partnerships with some of the most well-respected surgeons, engineers and product development specialists on the globe.

We have always been committed to progressing the veterinary industry and the people that work in it, and will never be just about manufacturing and selling products. Our unrivalled customer support and service journey starts right at the beginning with our education program backed up by ongoing individual case support, implant recommendation, all the way through to post-op aftercare.

Our commitment to providing gold-standard care is why Orthomed has expanded its family within the veterinary industry and now stands side-by-side with Infiniti Medical®, a world leading supplier, manufacturer and educator for interventional radiology, cardiology and soft tissue surgery, which shares the same drive as Orthomed to help improve the veterinary industry.

Further information about Orthomed can be found at: www.orthomed.co.uk

Further information about Infiniti Medical® can be found at: www.infinitimedical.com

Through Orthomed, our team has spent many years constantly striving to offer better solutions, whether in orthopaedics, soft tissue, cardiology and other specialist fields. Our drive to expand the reach of our service offering has resulted in our latest venture, the launch of our new neurology arm; Neuromed.

We already work with world-leading neurologists to offer the highest level of spine and neuro education and have a range of products that nicely fit within that industry, but felt that no company was stepping up to become the driving force behind neurology innovation, offering the highest levels of customer support or education and certainly

not supported by a team of the most highly regarded surgeons in the world. Our success at doing just that in soft tissue surgery, cardiology and radiology inspired us to do it again in the neurology sector. This is why neuromed vet was created.

Further information about Neuromed can be found at www.neuromedvet.com

With the patient's welfare, the patient owners trust and the confidence we install into the surgeon at the forefront of what we do, we truly believe we are a veterinary family you can trust.
